

What is Rat Lungworm Disease?

The rat lungworm can cause a disease called angiostrongyliasis (rat lungworm disease) which can affect the brain and spinal cord.

Symptoms may include severe headache, stiffness of the neck and back, skin tingling and sensitivity, sensitivity to light, hallucinations, nausea and vomiting.

Cuban Slug

Semi Slug

Foods such as raw produce, raw or undercooked snails, shrimp and prawns can be contaminated by an unseen parasite *Angiostrongylus cantonensis* (rat lungworm). The rat lungworm is found most often in snails and slugs and has also been found in the flatworm. The worm infects rats, which passes the parasite to snails and slugs, not humans.

Baby Semi Slug on nickel

Giant African Snail

Prevention

DO NOT eat raw foods contaminated with the slime* from snails or slugs or visible snail or slugs. **WASH PRODUCE** completely and boil snails, prawns, fish, crabs for **AT LEAST 3-5 MINUTES**. Do not handle snails and slugs with bare hands.

Apply slug bait to eliminate slugs from your garden. Cover your catchment tanks to prevent slugs and snails from having access. Controlling rodents can also help control the rat lungworm. *If you think you may have angiostrongyliasis, see your health care provider and let him/her know of your exposures.*

*Although scientists are not sure that exposure to slime can make you sick

For more information call the Hawai'i State Department of Health Disease Investigations office: 933-0912 or see CDC website: <http://www.dpd.cdc.gov/DPDx/HTML/Angiostrongyliasis.htm>
